## 2. Hazard Identification

### 2.1. Classification of the substance/mixture

The product contains a battery and is therefore classified as an article which is not hazardous when used according to the recommendations of the manufacturer. The hazard is associated with the contents of the battery. Under recommended use conditions, the electrode materials and liquid electrolyte are non-reactive provided that the battery integrity remains and the seals remain intact. The potential for exposure should not exist unless the cell in the battery leaks, is exposed to high temperatures or is mechanically, electrically or physically abused/damaged. If the cell in the battery is compromised and starts to leak, based upon the battery ingredients, the contents are classified as Hazardous.

### 2.2. R-Phrases:

R43 – May cause sensitisation by skin contact.  
R 36/38 – Irritating to eyes and skin.
